

# **Quantum Computation and Quantum Information: a Mathematical Perspective**

J.M. Landsberg

---

# Contents

Chapter 1. Classical and probabilistic computing	1
§1.1. 2025	1
§1.2. Surprising algorithms	2
§1.3. Notation, probability and linear algebra	7
§1.4. Classical Complexity	8
§1.5. Probabilistic computing	11
§1.6. Computation via linear algebra	12
Chapter 2. Quantum mechanics for quantum computing	19
§2.1. Quantum mechanics via probability	19
§2.2. Postulates of quantum mechanics and relevant linear algebra	23
§2.3. Super-dense coding	27
§2.4. Quantum Teleportation	28
§2.5. Bell's game	29
Chapter 3. Algorithms	33
§3.1. Primality testing	33
§3.2. Grover's search algorithm	37
§3.3. Simons' algorithm	39
§3.4. Quantum gate sets	41
§3.5. Shor's algorithm	44
§3.6. A unified perspective on quantum algorithms: the hidden subgroup problem	54
§3.7. What is a quantum computer?	55

---

---

§3.8. Appendix: review of basic information on groups and rings	55
Chapter 4. Classical information theory	57
§4.1. Data compression: noiseless channels	57
§4.2. Entropy, i.e., uncertainty	61
§4.3. Shannon's noiseless channel theorem	64
§4.4. Transmission over noisy channels	66
Chapter 5. Quantum information	71
§5.1. Reformulation of quantum mechanics	71
§5.2. Distances between classical and quantum probability distributions	79
§5.3. The quantum noiseless channel theorem	81
§5.4. Properties of von Neumann entropy	85
§5.5. Conditional von Neumann entropy and strong subadditivity	90
§5.6. Entanglement and LOCC	95
Chapter 6. Representation theory and Quantum information	105
§6.1. Representation theory	105
§6.2. Schur-Weyl duality and $\epsilon$ -typical subspaces	112
§6.3. The quantum marginal problem	114
§6.4. Tripartite States	119
Hints and Answers to Selected Exercises	123
Bibliography	127
Index	131
